Personal Statement

I am a dedicated Senior Software Engineer specialising in Java Spring Boot and artificial intelligence technologies. With a strong foundation in backend development and AI integration, I am committed to creating scalable, efficient solutions that drive innovation.

My passion lies in harnessing the power of technology to solve complex problems and improve user experiences. Whether optimising existing systems or pioneering new solutions, I thrive on transforming ideas into reality through code.

Key Achievements / Areas of Expertise

- **Technologies**
 - Spring Boot, Sagemaker, Maven, MongoDB, RESTful APIs (Application Programming Interface), Docker, Kubernetes, SQL Server, Git/Gitlab, AWS (Amazon Web Services), Jenkins, CI/CD, Unit testing, Etc.
- **Programming/ Languages**
 - My skills have varied over the years including;
 - **Java** – Upgrading and Developing Restful API's for Diageo, JLR and QVC.
 - **JavaScript** – Enhancing in-house webpages for staff to satisfy business needs.
 - **TypeScript** – Creating new and up-coming web applications.
 - **C#** - Creating in-house games for university for end-to-end process.
- **Software Engineer**
 - Developed Java Spring Boot Restful API's creating endpoints for the front-end applications and listeners so requests can be sorted correctly from the queues.
 - Developed Artificial Intelligent Sagemaker Models for Advertising Applications.
 - Lead Developer on created and participating with Releases and Release Management.
 - Site Reliability Engineering Champion for my team.
 - Lead Developer liaison with some of our stakeholders.
 - Supporting and pairing with team members teaching or learning an innovative technology.
 - Creating tickets for refinement and working with other Seniors to create work for the team.
 - I have worked on PCI applications based on EU financial systems within a global team going live to multiple countries.
 - Participating in business documentation and working to generate solutions to improve the business.
 - I worked on the full end-to-end processes from developing to supporting the releases.
 - Deployment operations include Jenkins/Gitlab/Code Commit scripting and continuous integration and continuous delivery (CI/CD) for applications.

- Testing applications using unit testing, integration testing, Soap UI testing, Newman tests.
- Line managing software engineers to help them grow within the team.
- **Non business experiences**
 - Completing work experience at the BBC where I learnt business processes and working with integrating 3rd party games to the business.
 - I joined a social team for IT engaging members to socialise to become one team within the business.
 - Participating in Hackathons within the business or at my university to innovate current systems or developing new applications.

Awards – Information can be found on LinkedIn

Campaign Tech Award - Best Use of AI (International)

Issued by Campaign · Jun 2025

The Drum Awards for Marketing!

Issued by The Drum Awards Marketing EMEA · Jun 2025

Forge Future Back New Frontiers

Issued byDiageo Breakthrough Innovations · Oct 2023

Barclays Technology Challenge 2016 Winners

Issued by Barclays, BBC and Bank of America · November 2016

Current Employment:

Diageo – Senior Software Engineer

November 2022 – To Date

Diageo is a British multinational alcoholic beverage company serving customers all around the world. It operates 130+ sites around the world being a major distributor the spirit bevarages. Most well known drinks are Johnnie Walker, Smirnoff, Baileys, Guinness, Gordon’s and Tanqueray.

My Responsibilities

- Creating API’s regarding food and drink services using machine learning to let our customers know their personal flavours and suggest a item which will compliment their pallet.
- Sagemaker Modelling (AI)
- Production Support.
- Lead Developer.

Out of work projects:

Driving Instructor Website

I spent some of my time working with a family member creating a website for him and his business partner for a website. This website was created solely for leads on new students to join either themselves or the team under them. This website is still running for the business with support from myself when needed.

Wedding Website

I spent some of my time creating my personal wedding website last year using React which had the main purpose of invite responses. For this I created a website, API and a database so that friends and family would be able to respond instantly instead of using the post, as well as getting all the event

details online. This was fully functional online using AWS services to keep the applications online for people to use anywhere in the world.

Previous Employment:

Jaguar Land Rover – Senior Software Engineer

August 2020 – November 2022

Jaguar Land Rover is an automobile manufacturer based all over the world, creating new and innovative modern luxury cars and hi-tech software within them.

My Responsibilities

- Creating new microservices for the on-board infotainment system and maintaining the outdated version.
- Production Support.
- Site Reliability Engineering Champion.
- Lead Developer on Releases.

Qurate Retail Group – Software Engineer

August 2017 – October 2020

Qurate Retail Group, formerly known as Liberty Interactive, is comprised of eight leading retail brands all dedicated to providing a Third way to shop. Qurate is the #1 in video commerce and e-commerce.

My Responsibilities

- Creating Restful API's and web applications focusing on EU systems within a global team.
- Generating new processes to innovate and improve the current business models within a fast-integrating team creating/supporting current applications.

CyberGaTE (Games Developer)

April 2016 – August 2017

CyberGaTE is a university funded project which focuses on developing cyber-security training by creating gamified learning resources on a virtual training environment using the innovative concept of 'Classroom as a Service,' offering the required hands-on real-world experience. The project aims to engage employers and students to build and assess CyberGaTE's effectiveness as well as disseminate good practice in industry and academia.

My Responsibilities

- Creating a game for educational use, teaching the general cyber security issues in a company, and showing solutions to prevent this.
- Creating the assets and working with a team to create a game within a certain period.
- Working with the business to generate the best outcome of these gamified training applications.

Other Work Experience:

Games Engineer (BBC)

May 2017

- Evaluating and Supporting the team with looking into all the 3rd party games.
- Testing the games before release and evaluating focus groups for these games.
- Deploying the games evaluated and tested to the CBBC and CBeebies websites.

General labourer (Wyre Vale Parks)

Summers (July – August), 2012 - 2016

- Helping with the completion of bases for mobile homes and landscaping projects.
- Landscaping the current occupiers' mobile homes on the multiple parks Wyre Vale own.

Education / Qualifications:

Edge Hill University, Ormskirk

September 2014 – May 2017

I have achieved BSc (HONS) Computing (Games Programming) First Class Honours.
Winner of Barclays Tech Challenge.
Participated in Games Jam 2017/18.

Cardinal Newman College, Preston

September 2012 – June 2014

Obtained a total of 560 UCAS points (A*A*CC)

Garstang Community Academy, Garstang

September 2007 – June 2012

GCSE's (or equivalent) 6 A*s, 4 As and 3 Cs.

Outside interests

- My main hobby is gaming with my friends, the main games I love to play are Minecraft and some board games like Catan and Risk.
 - Also, to keep fit I go to the gym and on daily walks with the dog, both of which I find very enjoyable, and beneficial for my mental health as well as my physical health.
-
