KEY SKILLS

Java 8-25

Spring / Spring Boot

Gradle / Maven

Python

Microservices

AWS Experience

Cloud Architecture

CI/CD (AWS CodePipeline,
GitLab CI & Jenkins)

Docker

Linux

MongoDB

Dynamo DB

SQL

Machine Learning

Engineering (AWS
Sagemaker)

PROFILE

I'm a Lead Software Engineer with over 10 years of experience and a passion for Java Spring Boot, backend development, and artificial intelligence. I enjoy building scalable systems, integrating intelligent technologies, and creating solutions that are both reliable and impactful.

My experience spans robust API development, backend architecture, and AI-powered enhancements that help products become smarter, faster, and more useful. I'm confident in making technical decisions, evaluating trade-offs, and coordinating with internal and external teams to align delivery with business goals.

Whether I'm improving an existing platform or shaping a new idea from the ground up, I'm motivated by solving meaningful problems through thoughtful engineering. At the heart of my work is a simple goal: to use technology to create better experiences, stronger systems, and solutions that make a real difference.

CURRENT EMPLOYMENT HISTORY

LEAD SOFTWARE ENGINEER • NOV 2022 TO PRESENT

Diageo – Central London

- Architect greenfield internal services supporting marketing teams across the organisation.
- Expanded FlavorPrint from "What's Your Whisky" into a reusable personalization platform for whisky, beer, tequila, cocktails and food, growing consumer flavour profiles from 400,000 to more than 70 million.
- Development of Java and Spring Boot microservices on Amazon ECS using MongoDB and AWS Sagemaker. Developed and deployed machine-learning endpoints and modernized the APIs from Java 11/Spring 5 to Java 25/Spring Boot 4.
- Built a high-volume AI advertising module served through Google Ads, handling millions of daily requests with response time below 200ms.
- What's Your Cocktail won "Best Use of AI" at the Campaign Tech Awards 2025 and Gold for Data/Insight at The Drum Marketing Awards 2025.

LLM Development & Prompt Engineering

JavaScript / TypeScript /

React / Angular

Playwright

EDUCATION

BSC (HONS) GAMES PROGRAMMING • SEPT 2014 – MAY 2017

Edge Hill University – First Class Honours

PERSONAL PROJECTS

Driving Instructor Website - 2025
Wedding Website – 2021
Games Engineer Internship - 2017
Games Jams – 2016/17
Barclays Tech Challenge - 2016

- Led the CI/CD pipelines and introduced SonarQube quality gates, raising unit-test coverage from 0% to over 80% across the portfolio, with most projects reaching over 95%.
- Established modern engineering practices and standards across internal and supplier teams by introducing pull request reviews, improved documentation and Architecture Decision Records.
- Led the backend services for Everpour using Java and Spring Boot on AWS Lambda, Python-based AWS Glue jobs and DynamoDB, enabling its mobile application and connected bar dispensers to report keg movements and dispense data. Everpour won “Reusable Pack of the Year” at the UK Packaging Awards 2026.

PREVIOUS EXPERIENCE

SENIOR SOFTWARE ENGINEER • AUG 2020 – NOV 2022

Jaguar Land Rover – Manchester

- Developed microservices for in-vehicle infotainment systems while maintaining legacy platform services.
- Provided production support for critical services, investigating incidents and driving timely resolutions.
- Line managed four software engineers, supporting career development, delivery performance, and day-to-day engineering practices.
- Led development activity for software releases, coordinating delivery and release readiness.

SOFTWARE ENGINEER • AUG 2017 – OCT 2020

Quarte Retail Group – Liverpool

- Developed RESTful APIs and web applications supporting European systems within a global engineering team.
- Improved business processes by building and supporting applications in a fast-moving integration environment.
- Collaborated with cross-functional teams to deliver reliable solutions aligned with operational needs.

GAMES ENGINEER • APR 2016 – AUG 2017

CyberGaTE – Liverpool

- Developed an educational cyber security game designed to teach common workplace security risks and prevention strategies.
- Created game assets and collaborated with the team to deliver gamified training applications within project timelines.
- Worked with business stakeholders to shape learning outcomes and improve the effectiveness of training experiences.
